# ALWAYS MAKE MONEY RENTING

## FAST ROI

**SPLIT-FIRE®** invented and designed the 2-Way Log Splitter to exceed the needs of the Equipment Rental Industry - including the safety, performance, maintenance, durability, resale, and return on investment (ROI) requirements demanded by rental shops.

Equally and if not more important is the rental customer's experience with the equipment. **SPLIT-FIRE®** prides itself on developing products that not only exceed the requirements of the rental shop, but also exceed the expectations of the rental customer; with a machine that is safe to use, is super productive, and makes for a great firewood splitting experience over-all.

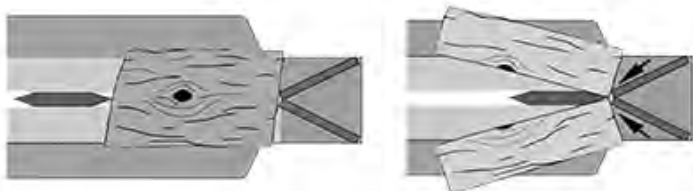

Productivity is achieved due to the 2-way log splitter design which ensures the knife is always in the ready to split position, without the need for a retracting cycle common with conventional log splitters.

Rental customers instantly notice these benefits of safety and efficiency, so much so they return time-and-time again to request **SPLIT-FIRE®** brand "2 way" log splitters. Not only does **SPLIT-FIRE®** equipment improve customer satisfaction, it ensures you a fast return on investment (ROI), and affords you an asset that sustains a high re-sale value even after decades of use!

## SAFE

The **SPLIT-FIRE®** 2-way splitting action has been designed to be very safe. Our proprietary "V" shaped log stop reduces the surface area of pinch points, and does not allow for dangerous log flyouts as the pressure in the log is held on the center of the V log stop. The pressure is then released in a controlled manner around or past the V log stop. Compared to a conventional flat plate log stop, the pressure in the wood cannot be controlled as effectively, leading to log flyouts, frame twisting, and lost energy ultimately which equates to less available splitting force.

**SPLIT-FIRE®** 2-way log splitters **DO NOT** use detent valves. Detent valves auto-return on conventional log splitters and increase the risk of injury. An auto-return is not required since the **SPLIT-FIRE®** 2-way splitting action guarantees the knife is always in the ready to split position.

"...we have had Split-Fire log splitters in our rental fleet for over 10 years. They are most certainly the best splitter available on the market as far as quality and performance go. The support from Split-Fire is also a step above the rest, and I have nothing bad to say for their team or product. Keep up the good work guys!"

~ Allan Attwood / Cooper Equipment Rental

## LOW MAINTENANCE

SPLIT-FIRE® products are known for their low maintenance, and because they are utilizing UHMW slide pads, no steel-on-steel abrasion occurs, and slivers or burrs on the hardened plastic sliders are non-existent. It is the friction reduction engineering attributes, or the reduction of energy loss inherent in the machine design that really sets SPLIT-FIRE® apart from the competitors - meaning the splitting force possible from the power source is always maximized.

All soft spots, i.e. the engine, hydraulic hoses and lines, valves, and filter, are all located away from the splitting zone and therefore reduces the chance of damage. Further, SPLIT-FIRE® 2 way log splitters are designed with the cylinder mounted inside the frame, so the chance for cylinder damage is also non-existent.

All the components utilized in the design are manufactured in-house, with engines and materials sourced from North American suppliers. The only maintenance required in the first year of operation is an oil change, air filter cleaning or replacement, and a hydraulic filter change. SPLIT-FIRE® products are proven to be reliable, and will become the machine in your rental fleet that gets rented countless times without the need for maintenance!

“...with Split-Fire log splitters, the public is offered something not provided by others and we have had nothing but good comments, what with almost no maintenance these machines have given an excellent return on our investment. After owning them for 15 years, I would never consider purchasing another!”

~ Ray Clark / Saugeen Sales & Rentals

"...I've owned two machines for approximately six years. They have provided us with good service, are excellent rental products and are easy to maintain. When I am ready to buy a new log splitter, it will definitely be a Split-Fire."

~ Gary Skibowski | Owner Michigan Equipment Rentals & Sales, Inc.

# HORIZONTAL WOOD CHIPPER

## 4090

Introducing the **SPLIT-FIRE® 4090 Horizontal Wood Chipper**  
New gas powered wood chipper designed for equipment rental shops that is safe, efficient to use, and easy to transport.

The new SPLIT-FIRE® 4090 Horizontal Wood Chipper is designed for continuous heavy-duty use. It is a self-feeding wood chipper capable of handling untrimmed branches, leaves, and stringy wood to produce consistent 1/2 inch to 3/4 inch wood chips or mulch.

As with all SPLIT-FIRE brand products, the 4090 wood chipper is low maintenance; only requiring occasional engine and belt service, and blade sharpening or replacement.

### Horizontal Wood Chipper Features & Benefits:

#### COMPACT SIZE

Safe and easy for customers to tow or to move around the yard

#### OPERATOR SAFETY

36" long in-feed chute and protective shield keeps hands at a safe distance from rotor and blades

#### HIGH CAPACITY

Rated for 4" diameter branches and featuring a large opening to handle untrimmed branches and stringy or leafy material

#### BETTER ERGONOMICS

Designed with a low profile for easy loading and comfortable operation

#### POWERFUL ENGINE OPTIONS

Honda GXV and Kohler Engine options

#### HEAVY DUTY CONSTRUCTION

3/8" plate chipper box and heavy-duty 100lbs rotor for constant rental grade use

#### LOW MAINTENANCE

Quick latch removable in-feed chute, easily access belt, anvil, and bed blades for easier / faster servicing

“...when putting the equipment into service, I found the performance of the splitter and chipper exceeded my expectations. Also, the Customer Service at Split-Fire is exceptional. Any questions or help I needed was only as far away as my phone. My experience with Split-Fire Sales Inc. is a solid five-star rating.”

~ Al Beindit, Port Huron, Michigan, United States

# FAST FREDDY WINDER

## FAST FREDDY

### HOSE + CORD + CABLE WINDER

Fast Freddy is a Lay Flat Hose Winder Plus! It's the all-in-one winding tool rental shops use to wind, clean, and organize customer returned lay flat hose, air hose, gas line, extension cord, rope, and more!

- 3 Heavy Duty Models / Sizes: FF2 (17") / FF4 (30") / FF6 (38")
- Create uniform coils for easy organization or storage
- Ergonomic design allows operator to wind in upright position reducing operator strain and fatigue
- Maintenance-free design and construction
- Made to last of corrosion-resistant materials
- Increases productivity and saves time

Adjustable Guide Rollers

"...out of our location we have thousands of heaters which require extension cords and gas lines when they go out. Having the Fast Freddy keeps our hoses compact and enables us to save space. For anyone that rolls up a lot of hose/cord this is something that will definitely help."

~ Justin Lorenowicz, Sunbelt Rentals

# **SPLIT-FIRE**

## **The Picture Perfect INVESTMENT**

"...we purchased #1 log splitter 10/2005 and have brought in \$40,000 gross revenue with \$500.00 in maintenance costs.

We purchased #2 log splitter 10/2006 and have brought in \$34,000 gross revenue with \$500.00 in maintenance costs.

We do maintain these well and they have lasted several years of Rental Use!"

~Brian Grant, Grant's Rental Bridgewater, MA

Check out this Split-Fire 4490 that just came in for some service (Formerly 290-4). It's the 750th machine that was built by Split-Fire making it 29 years old!

This 32 ton machine is still good for years to come. When you buy a Split-Fire, we say it will be the last log splitter you'll need to buy - this is the proof!
